

1. Download the Manufacturer's App

1. Go to the App Store (iOS) or Google Play (Android)
2. Search and install the official app for your NVR brand (e.g., Hik-Connect, DMSS, XMEye, etc.)

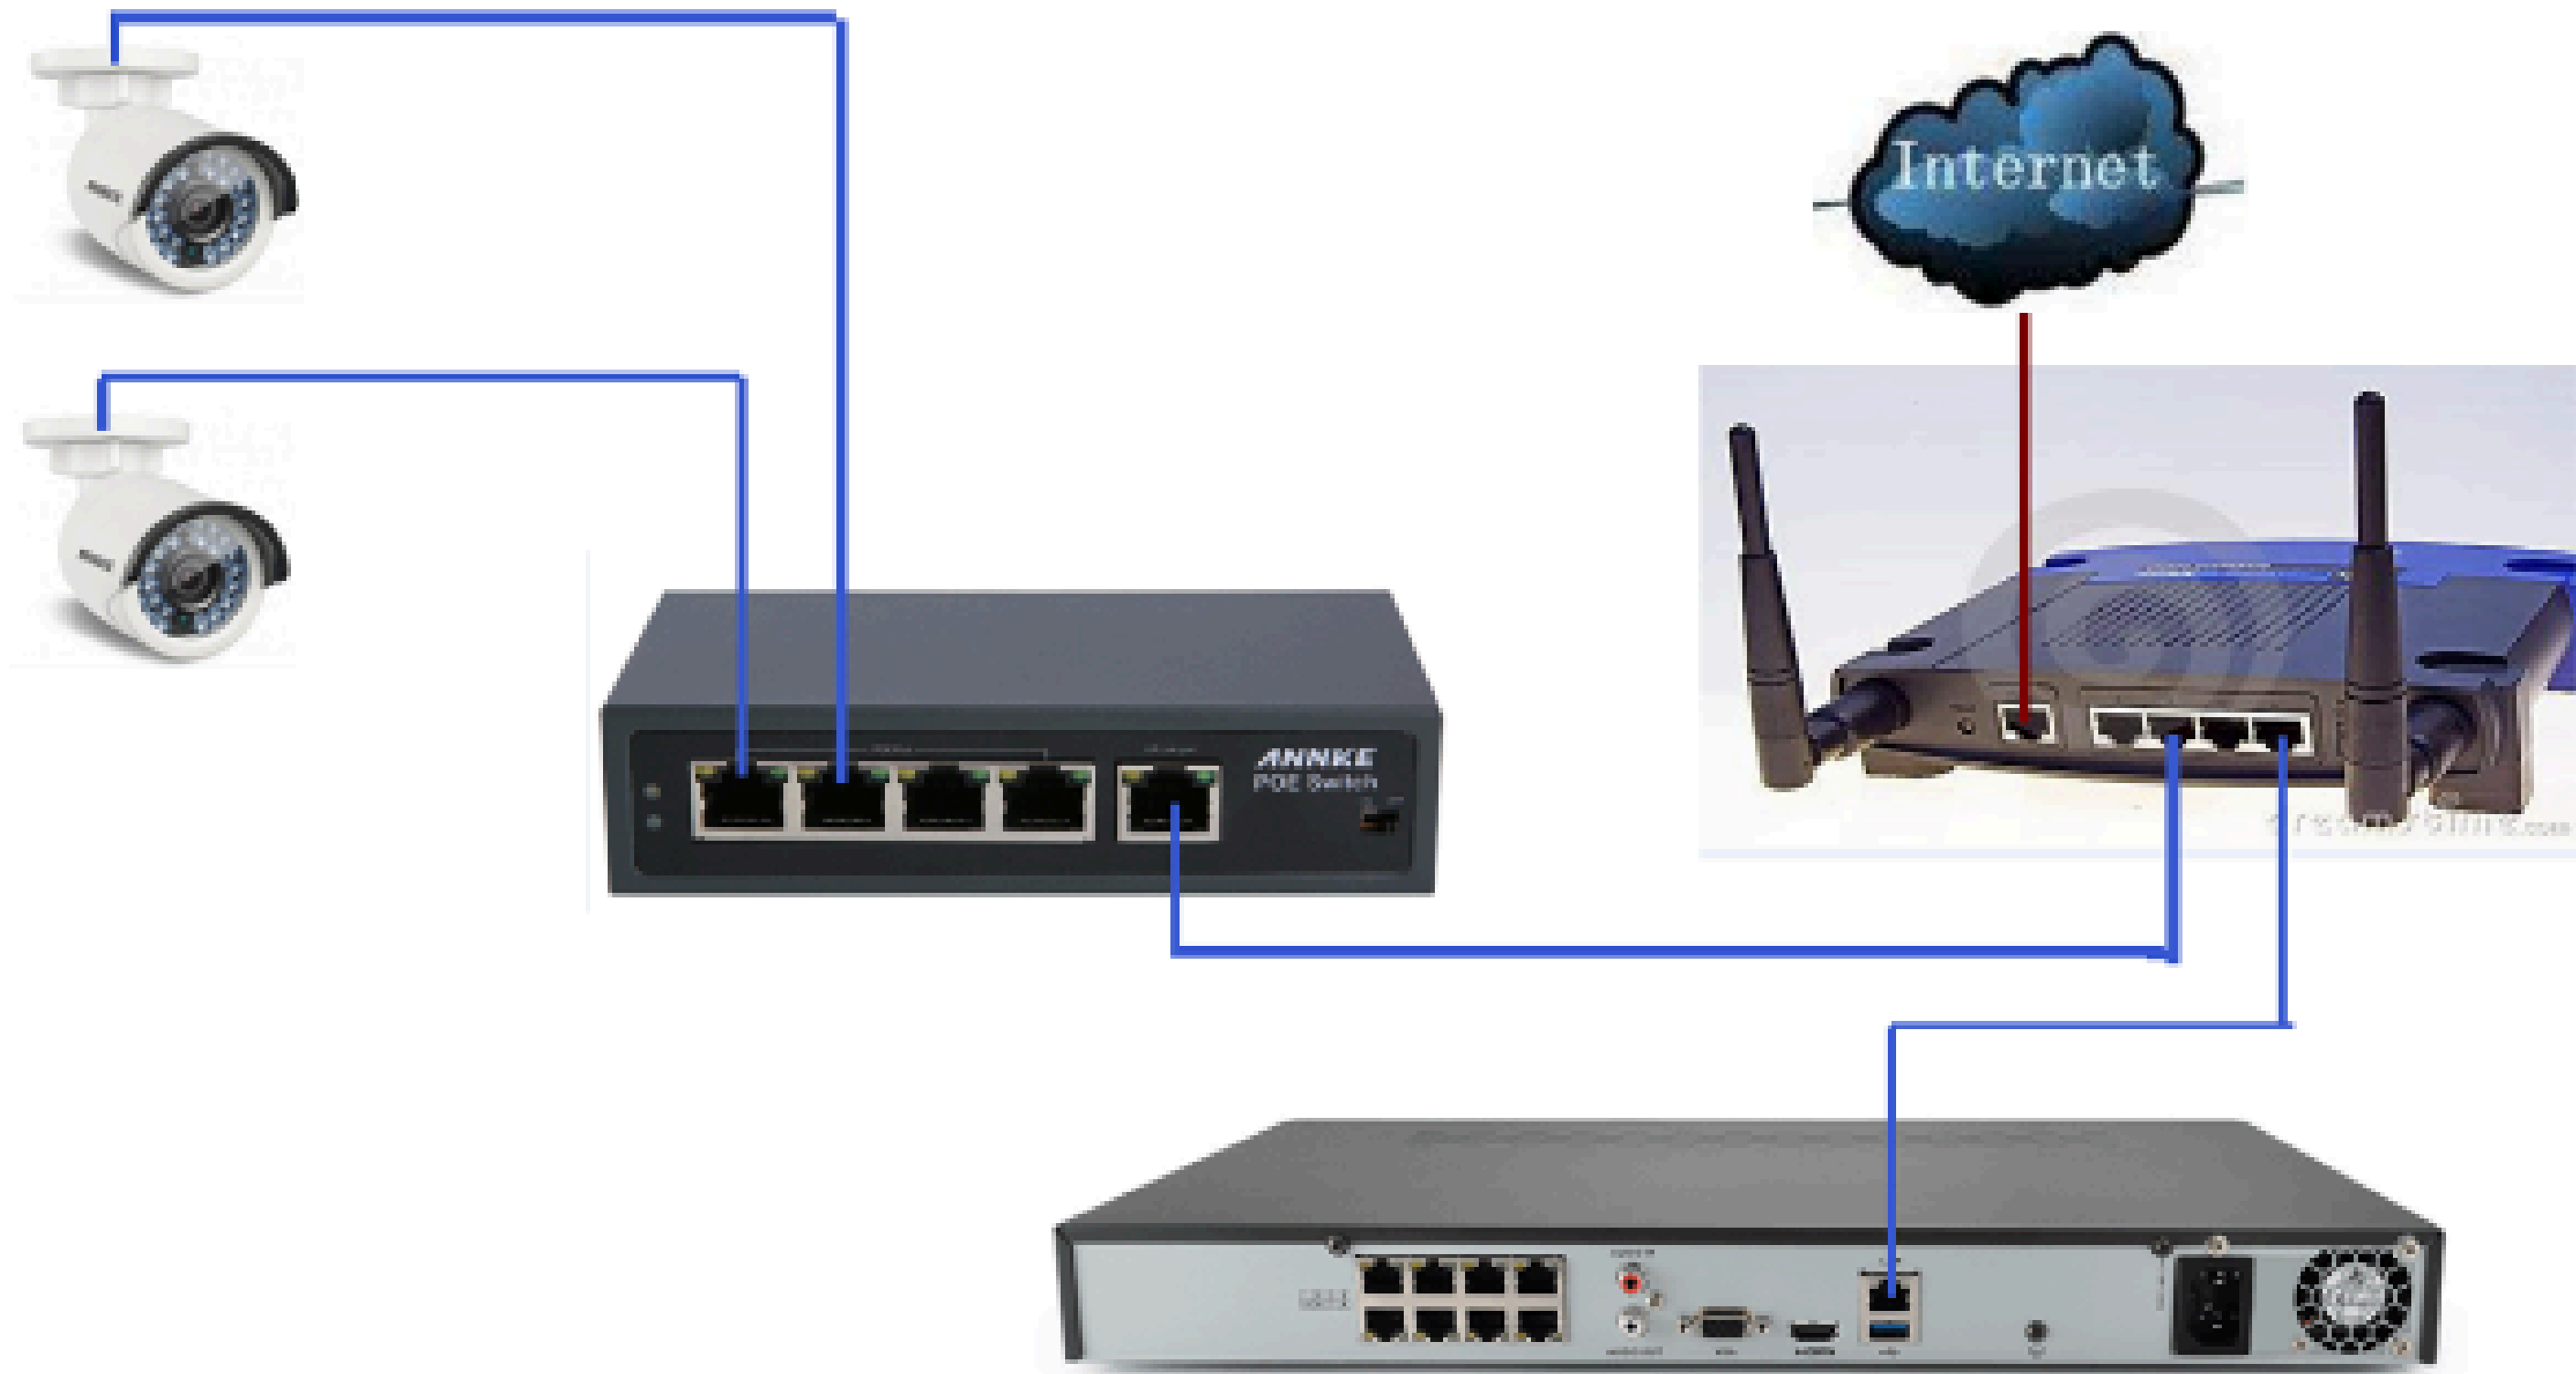

2. Connect the NVR to Network

1. Plug the NVR into your router via Ethernet.
2. Power it on and make sure cameras are connected and recording locally.

2. Connect the NVR to Network

How to connect the camera to the NVR via the POE switch

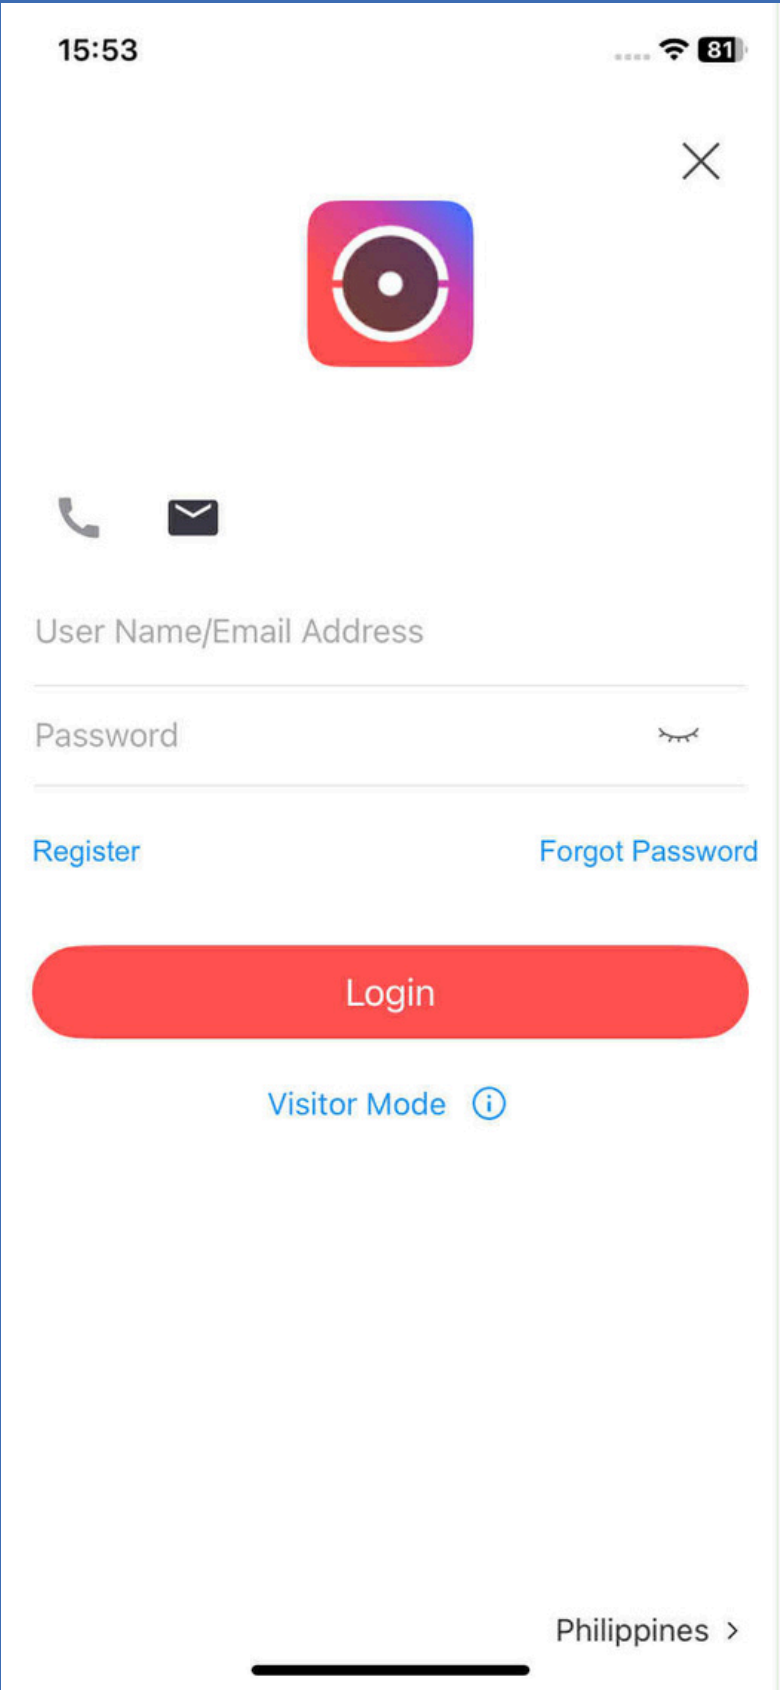

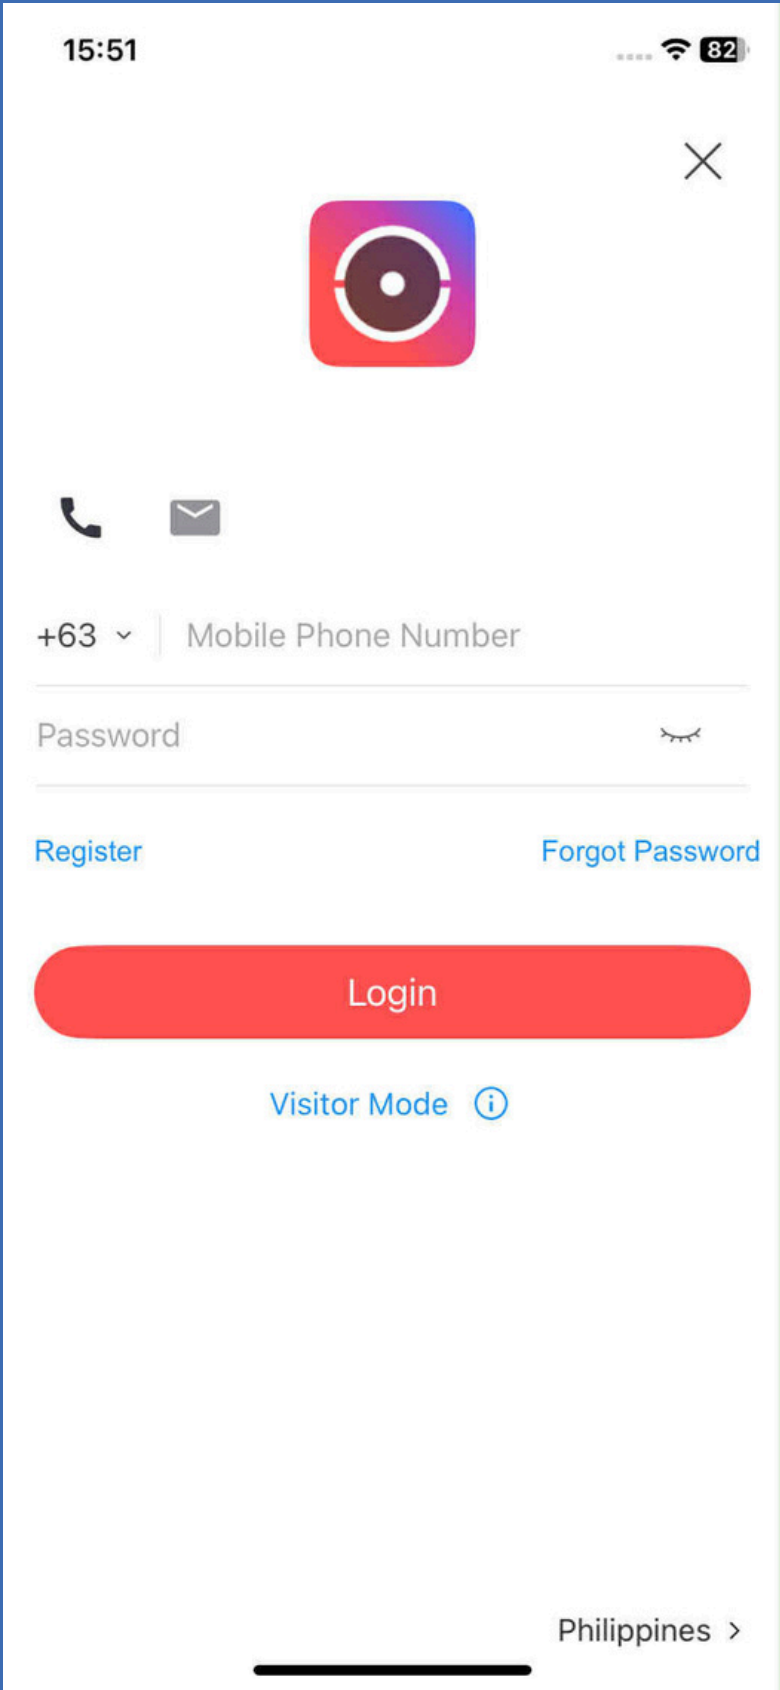

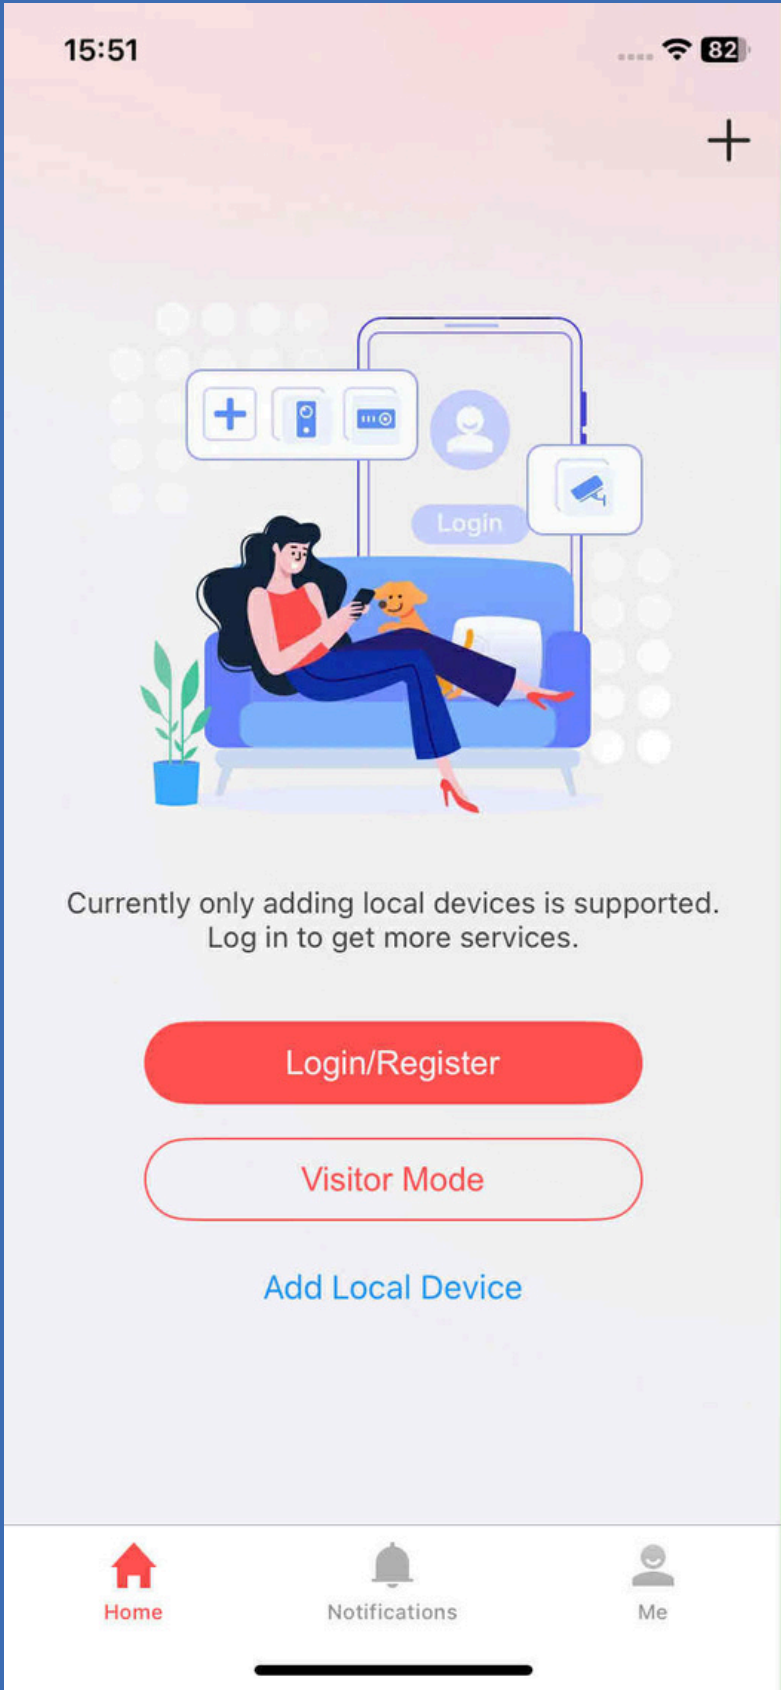

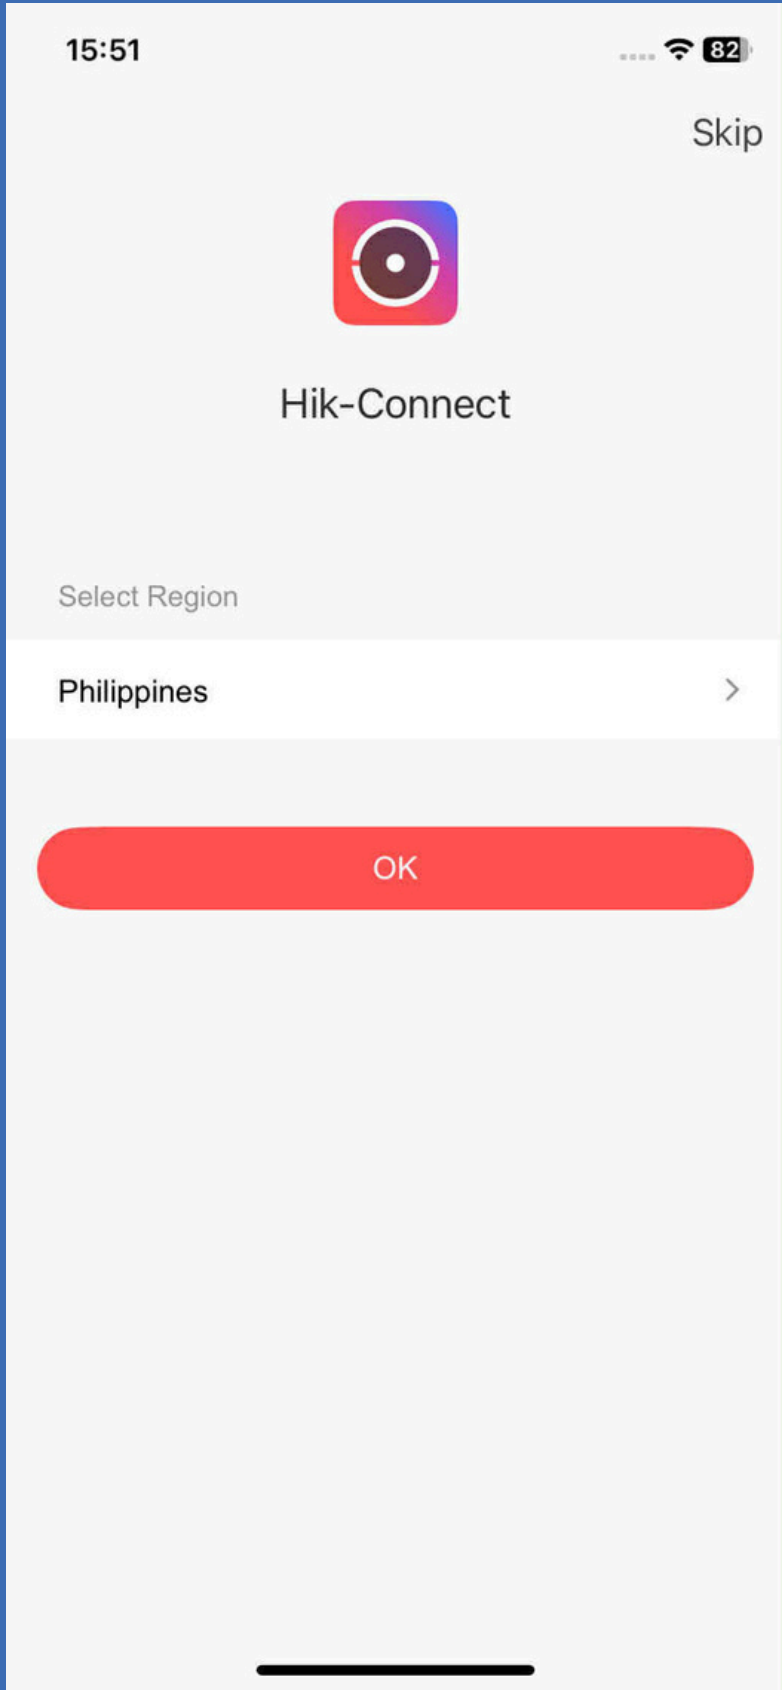

3. Create an Account in the App

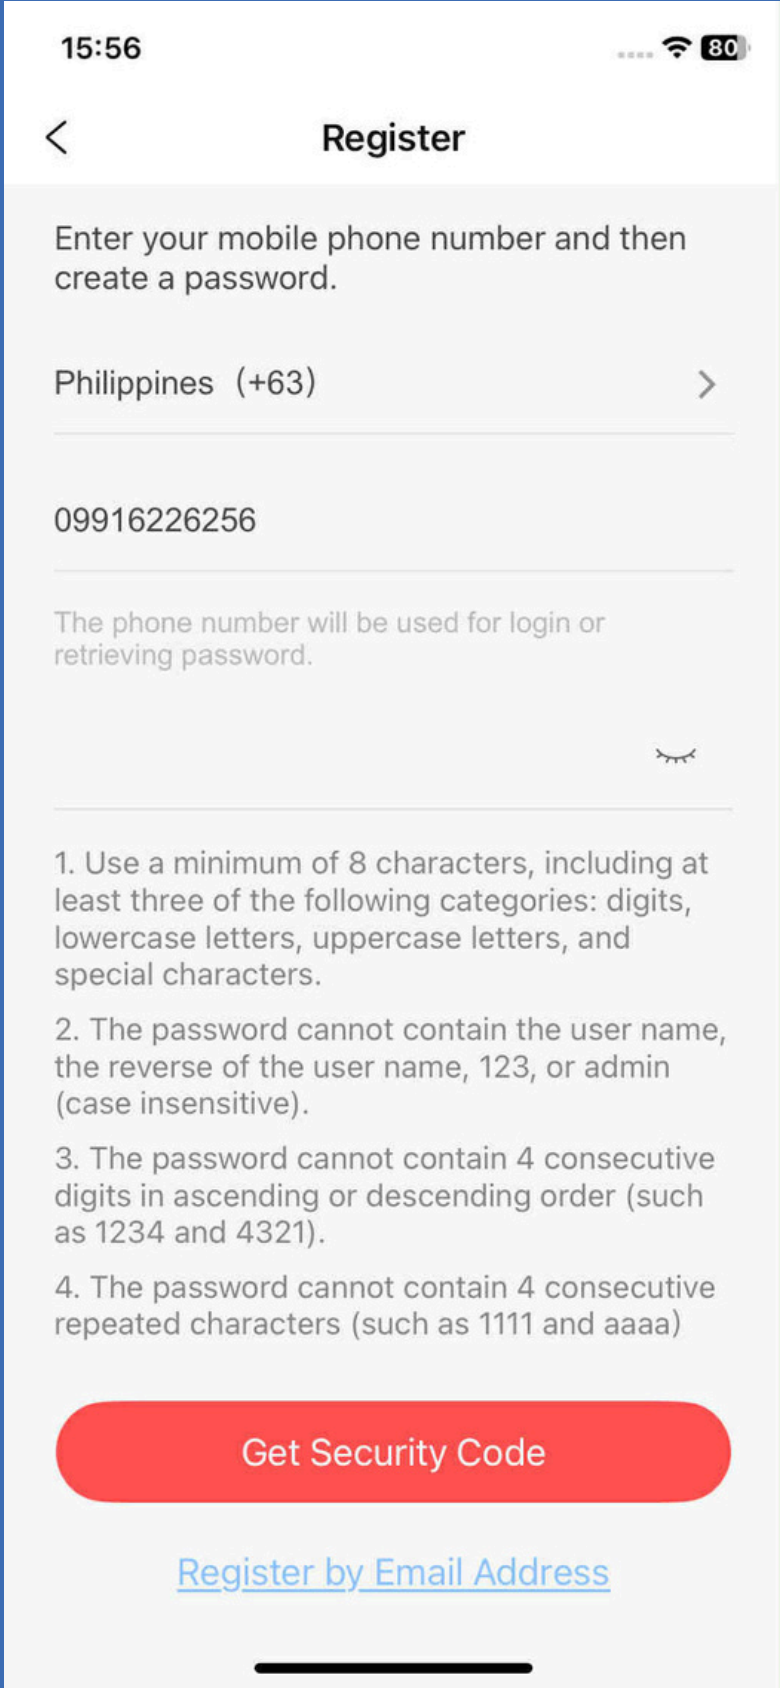

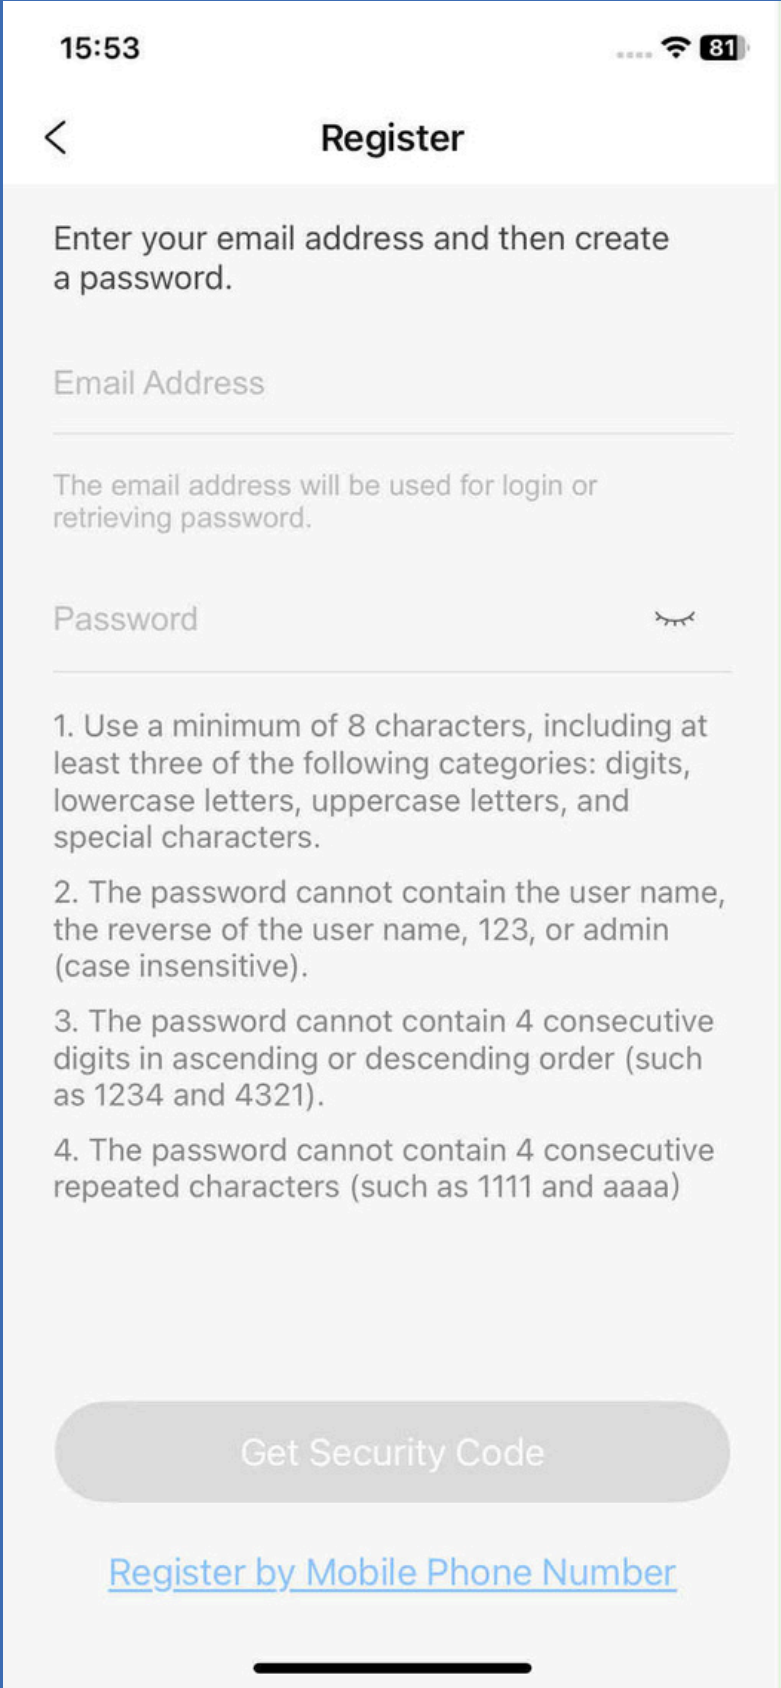

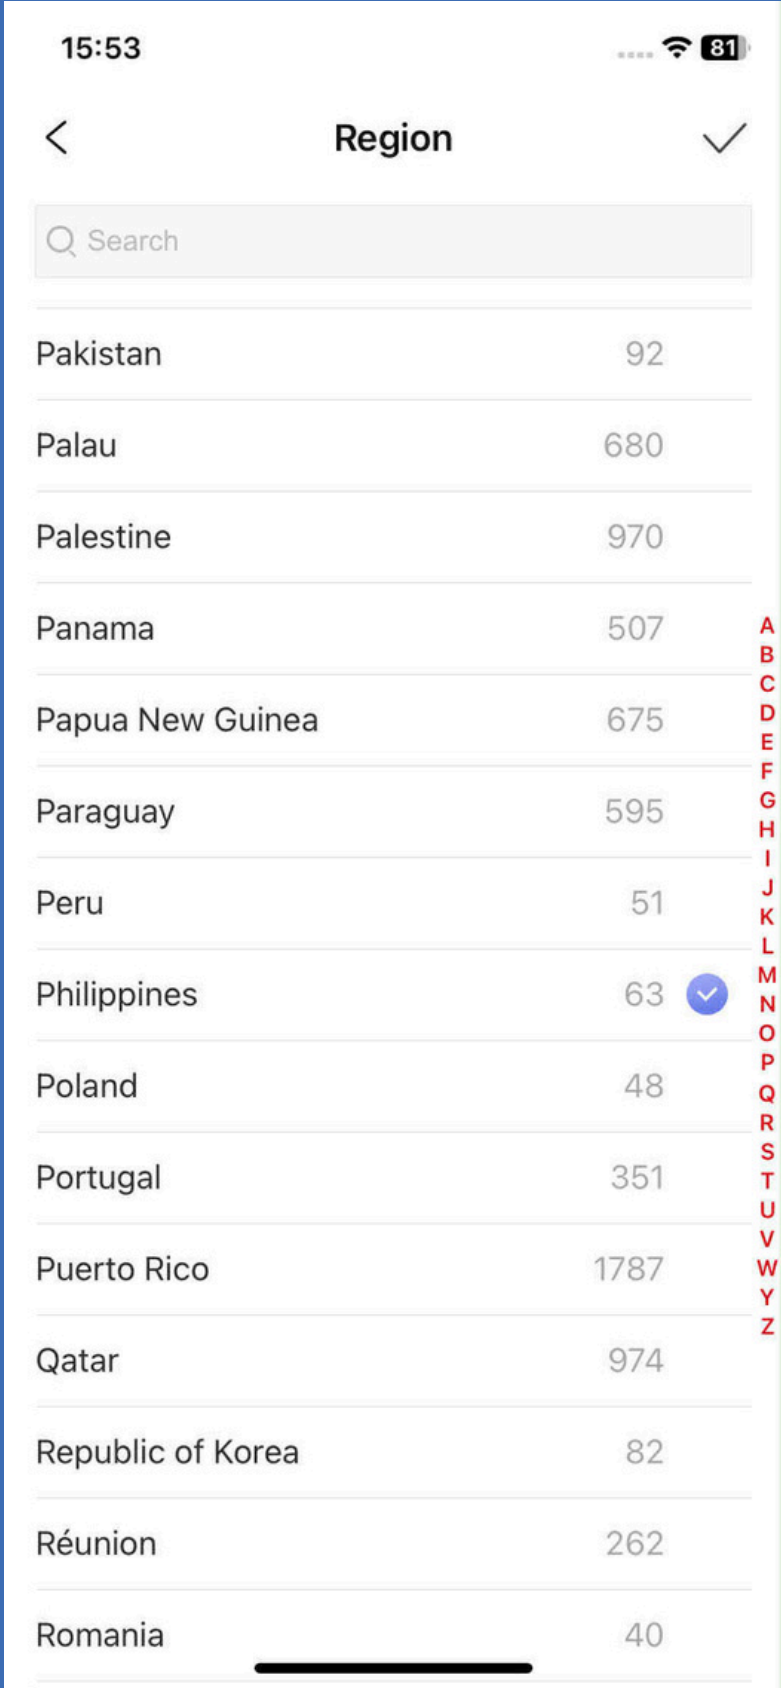

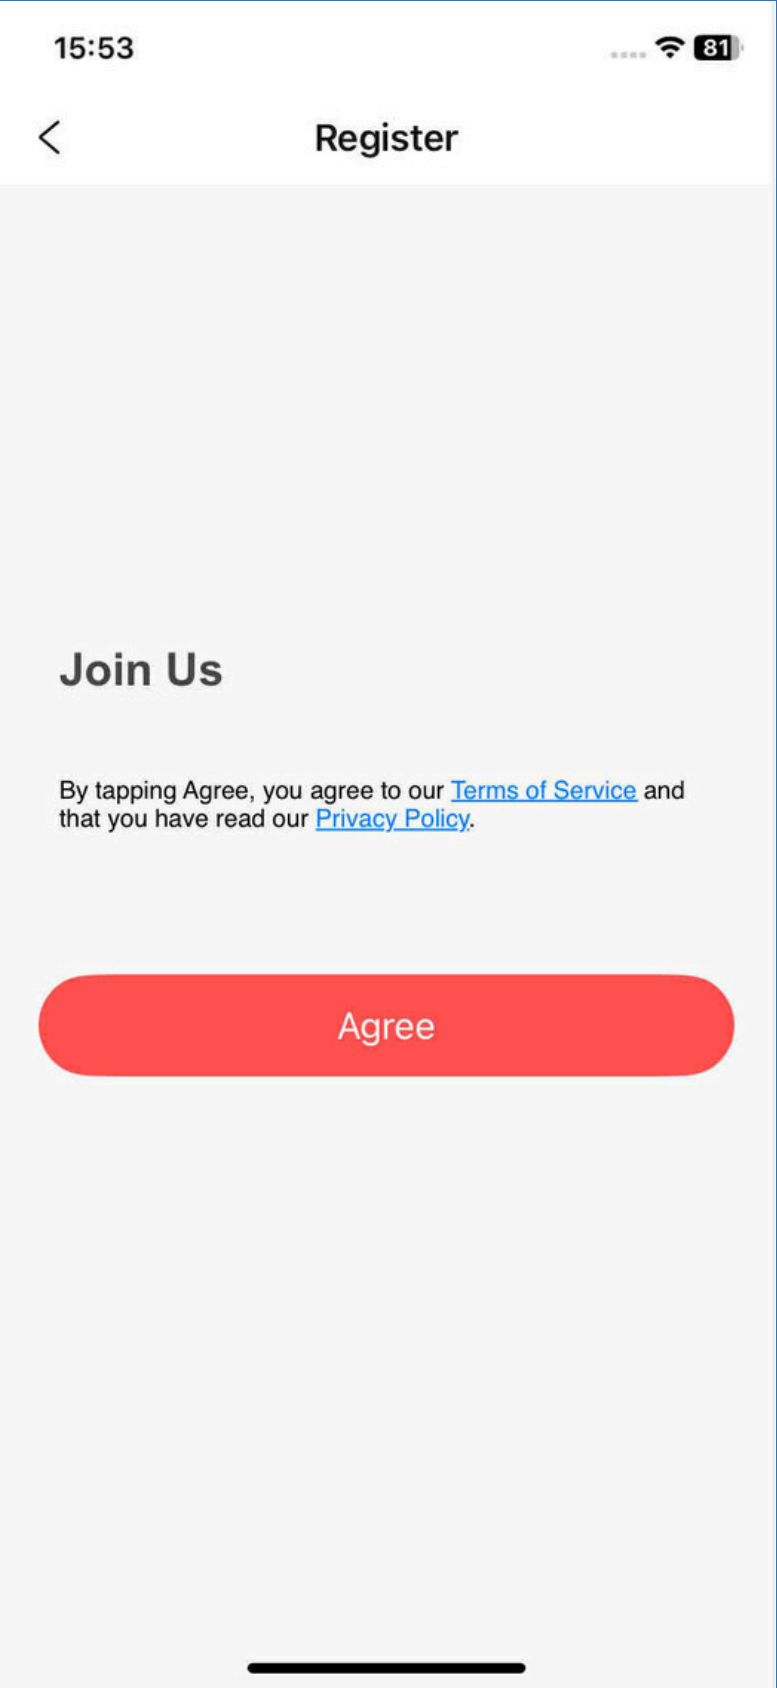

Note : Make sure to have an app like Hik-Connect, iVMS, or XMEye

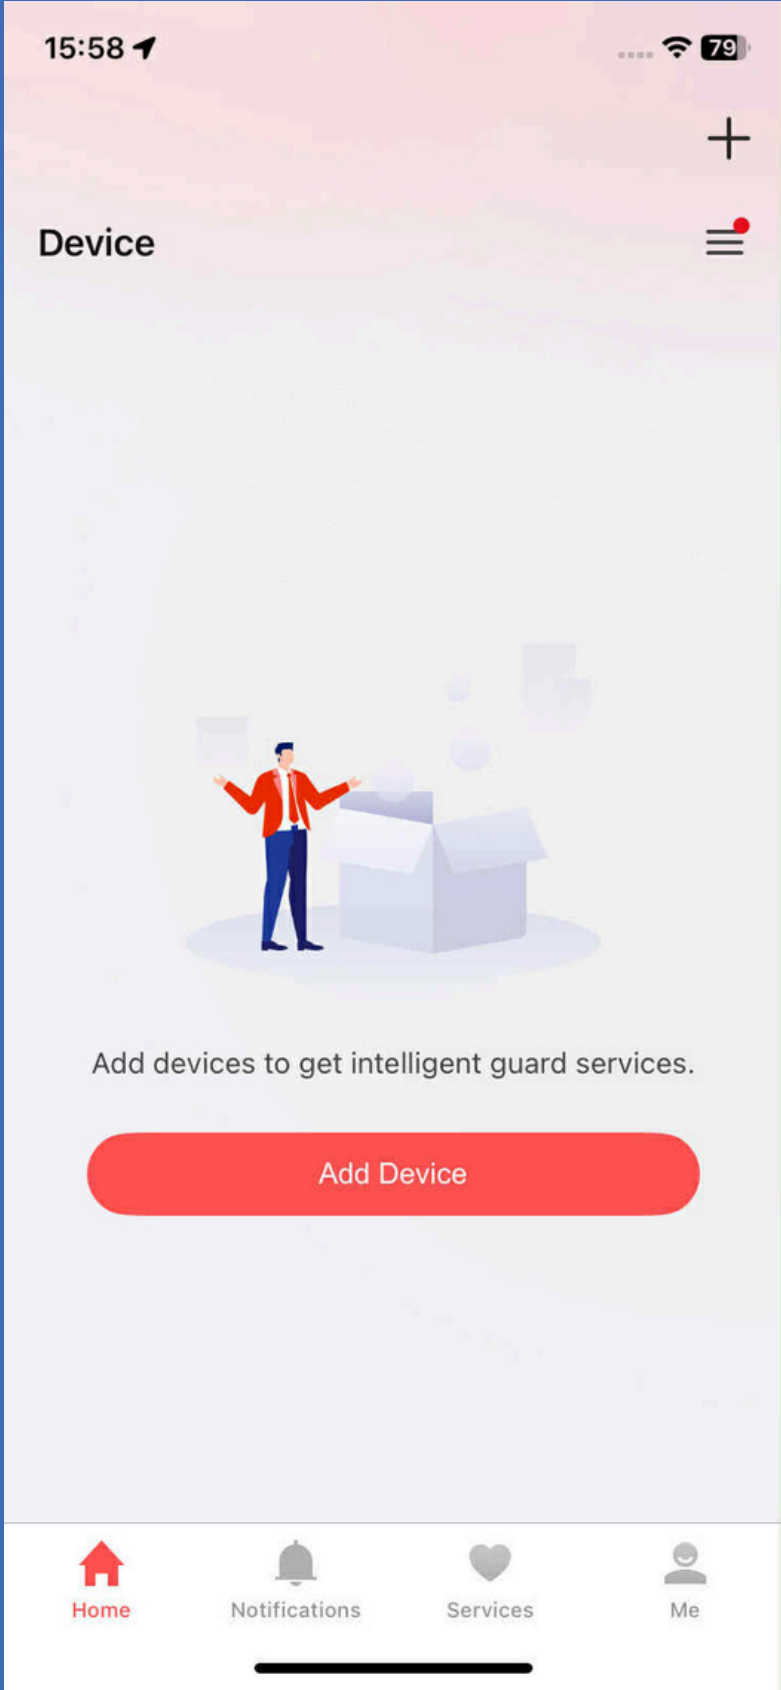

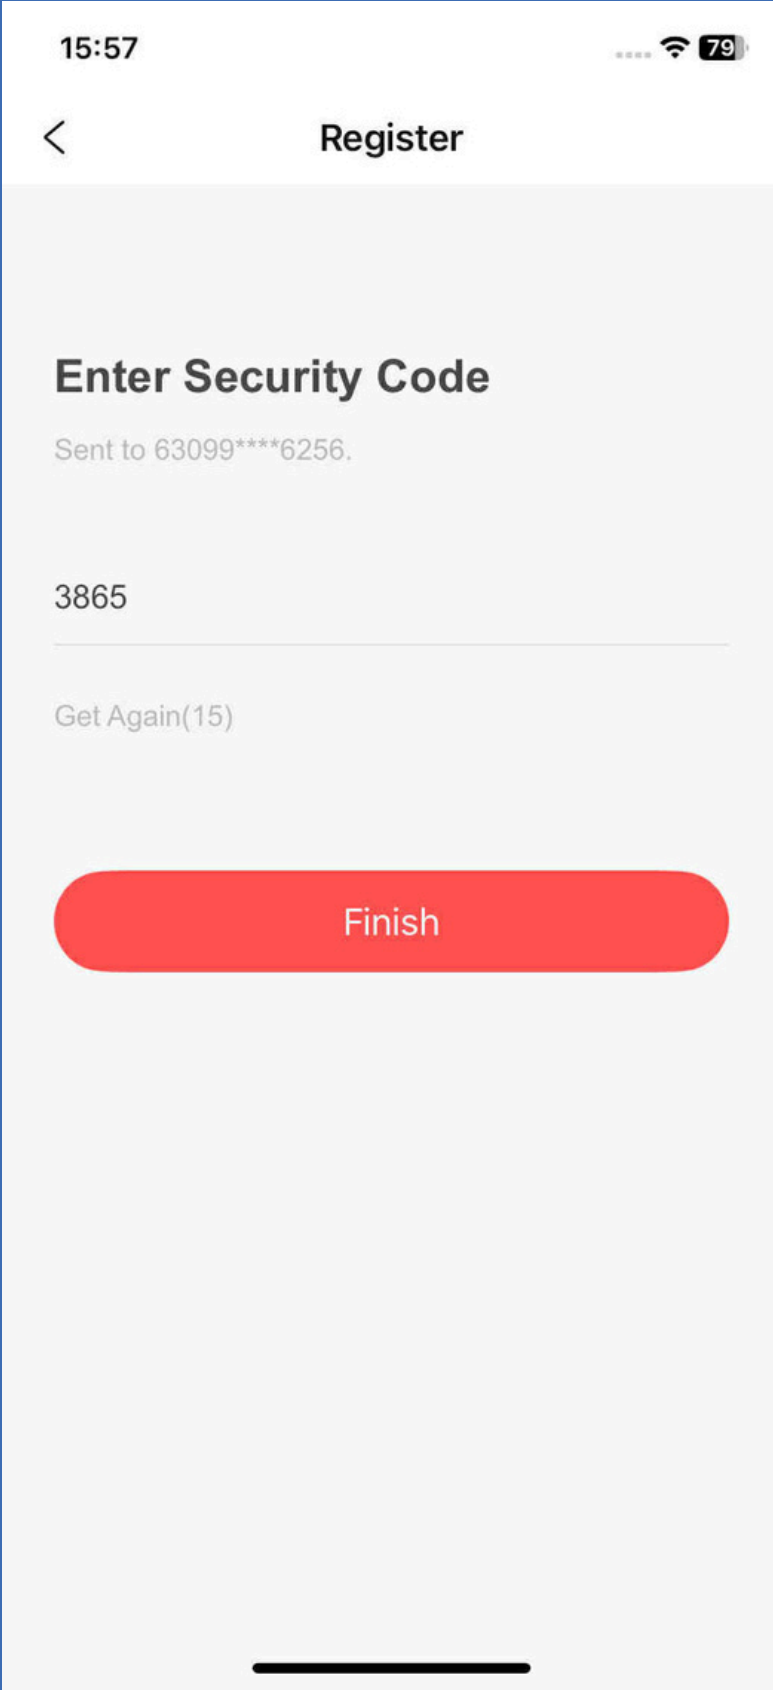

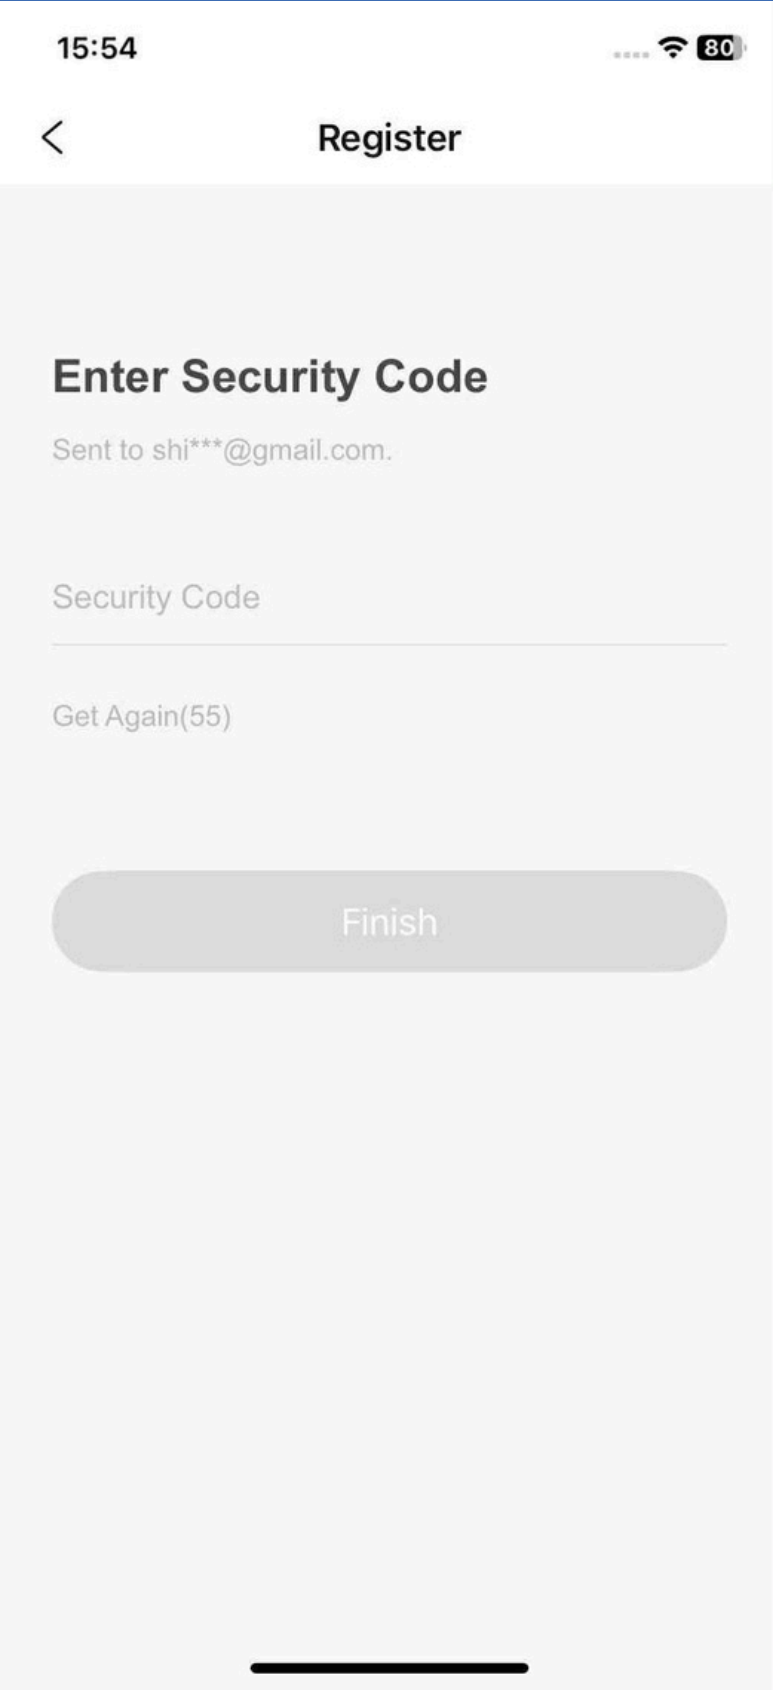

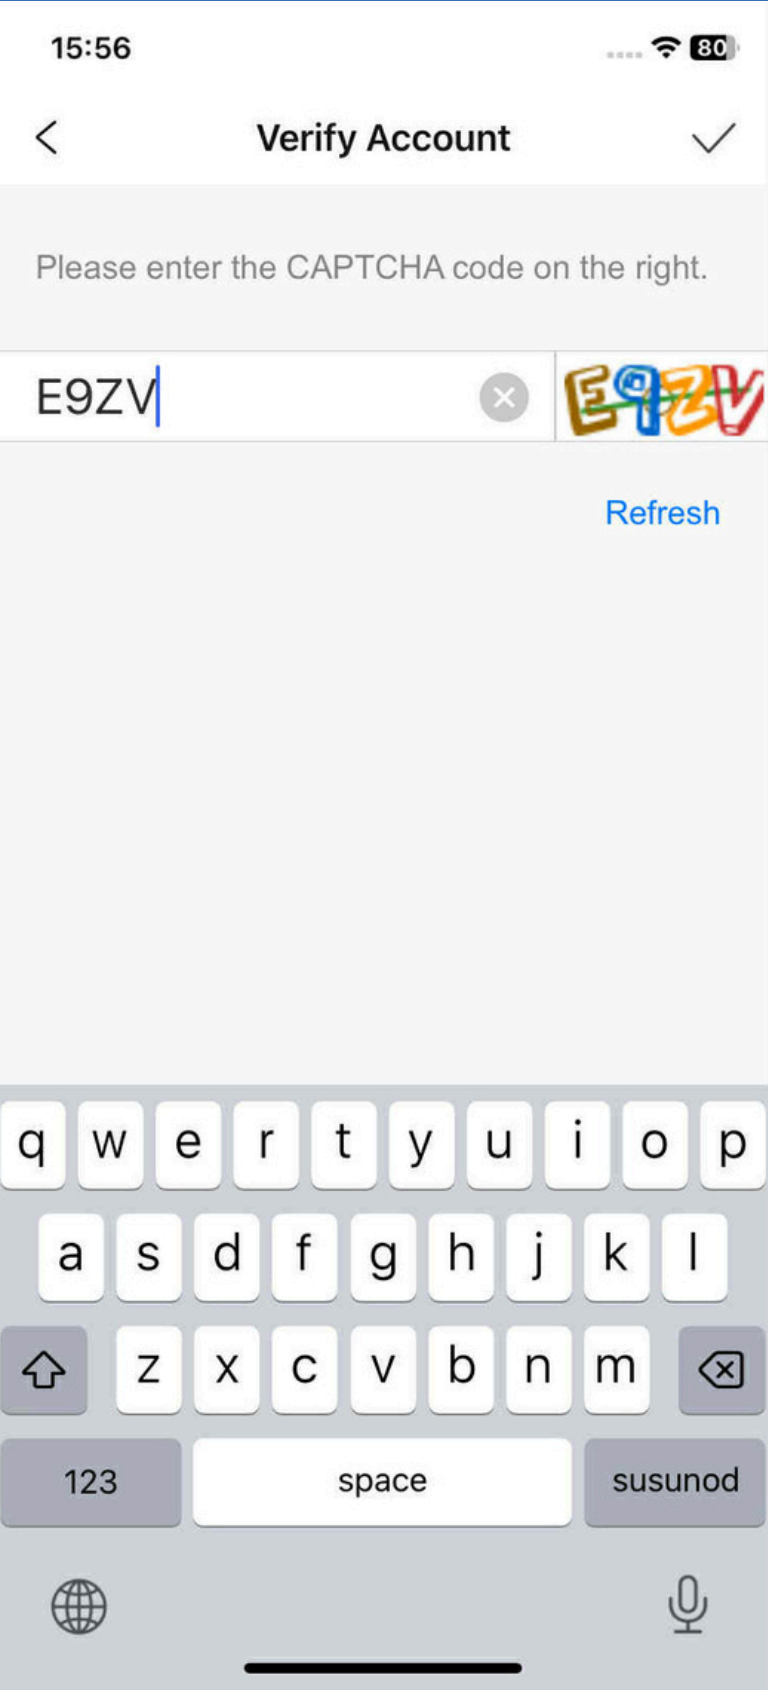

3. Create an Account in the App

3. Create an Account in the App

3. Create an Account in the App

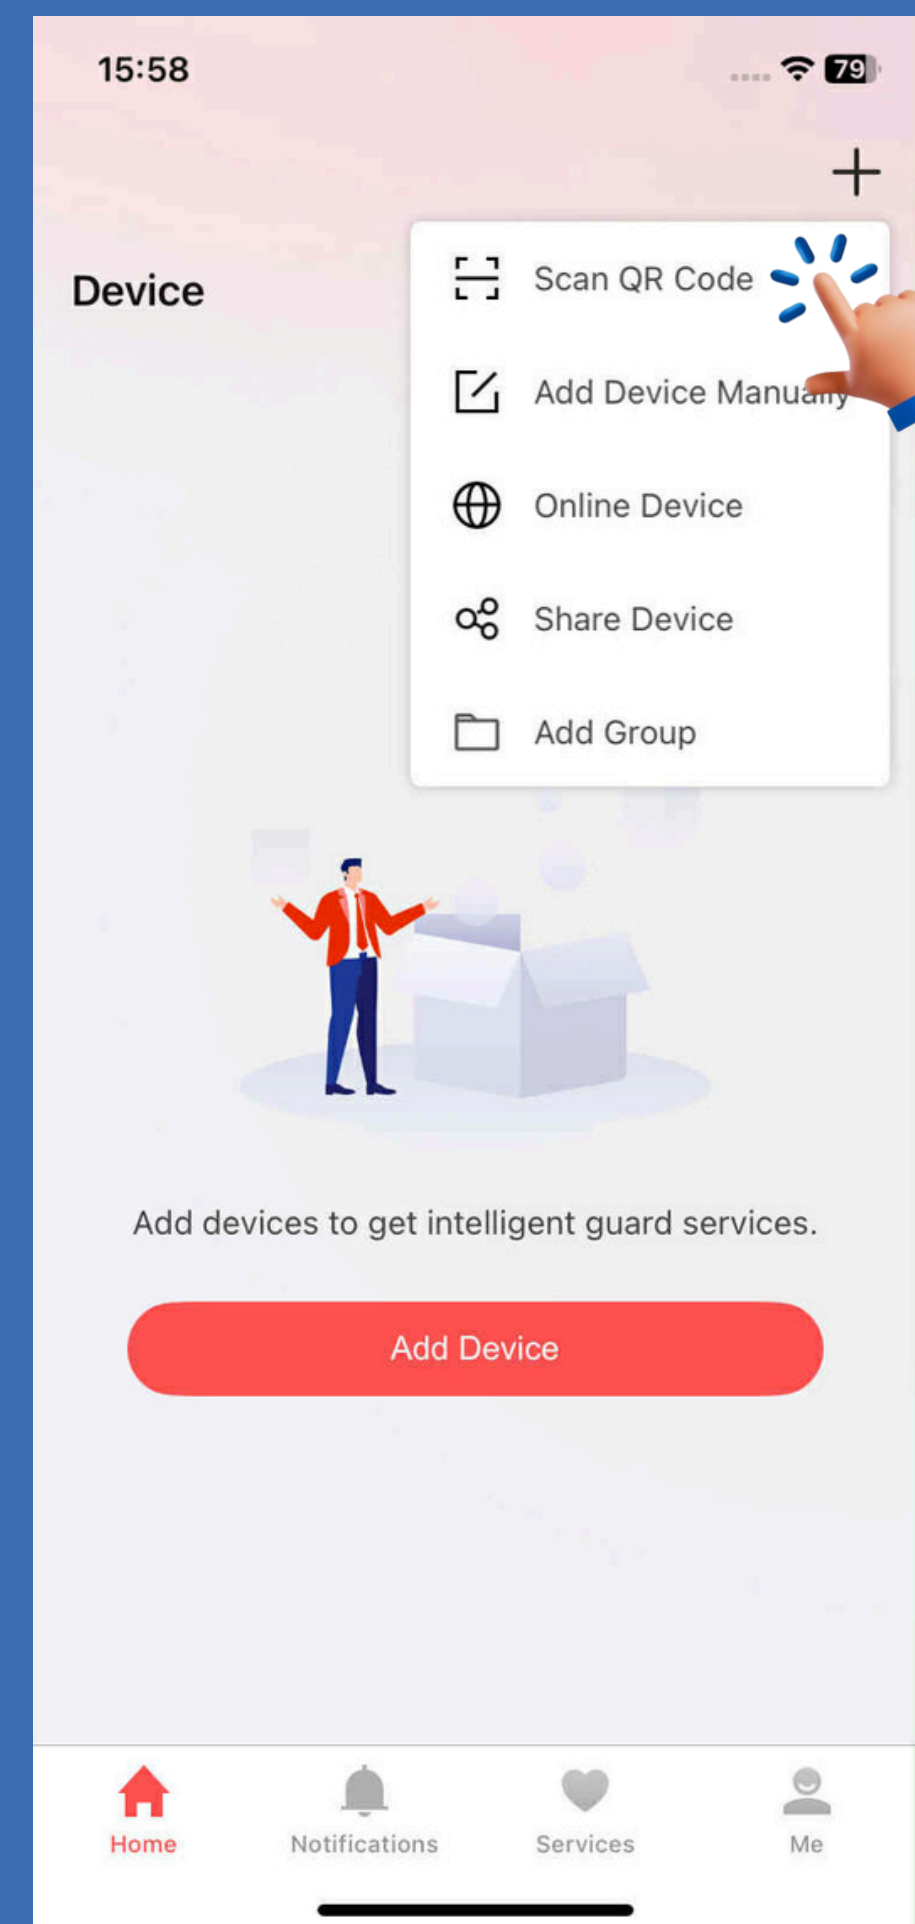

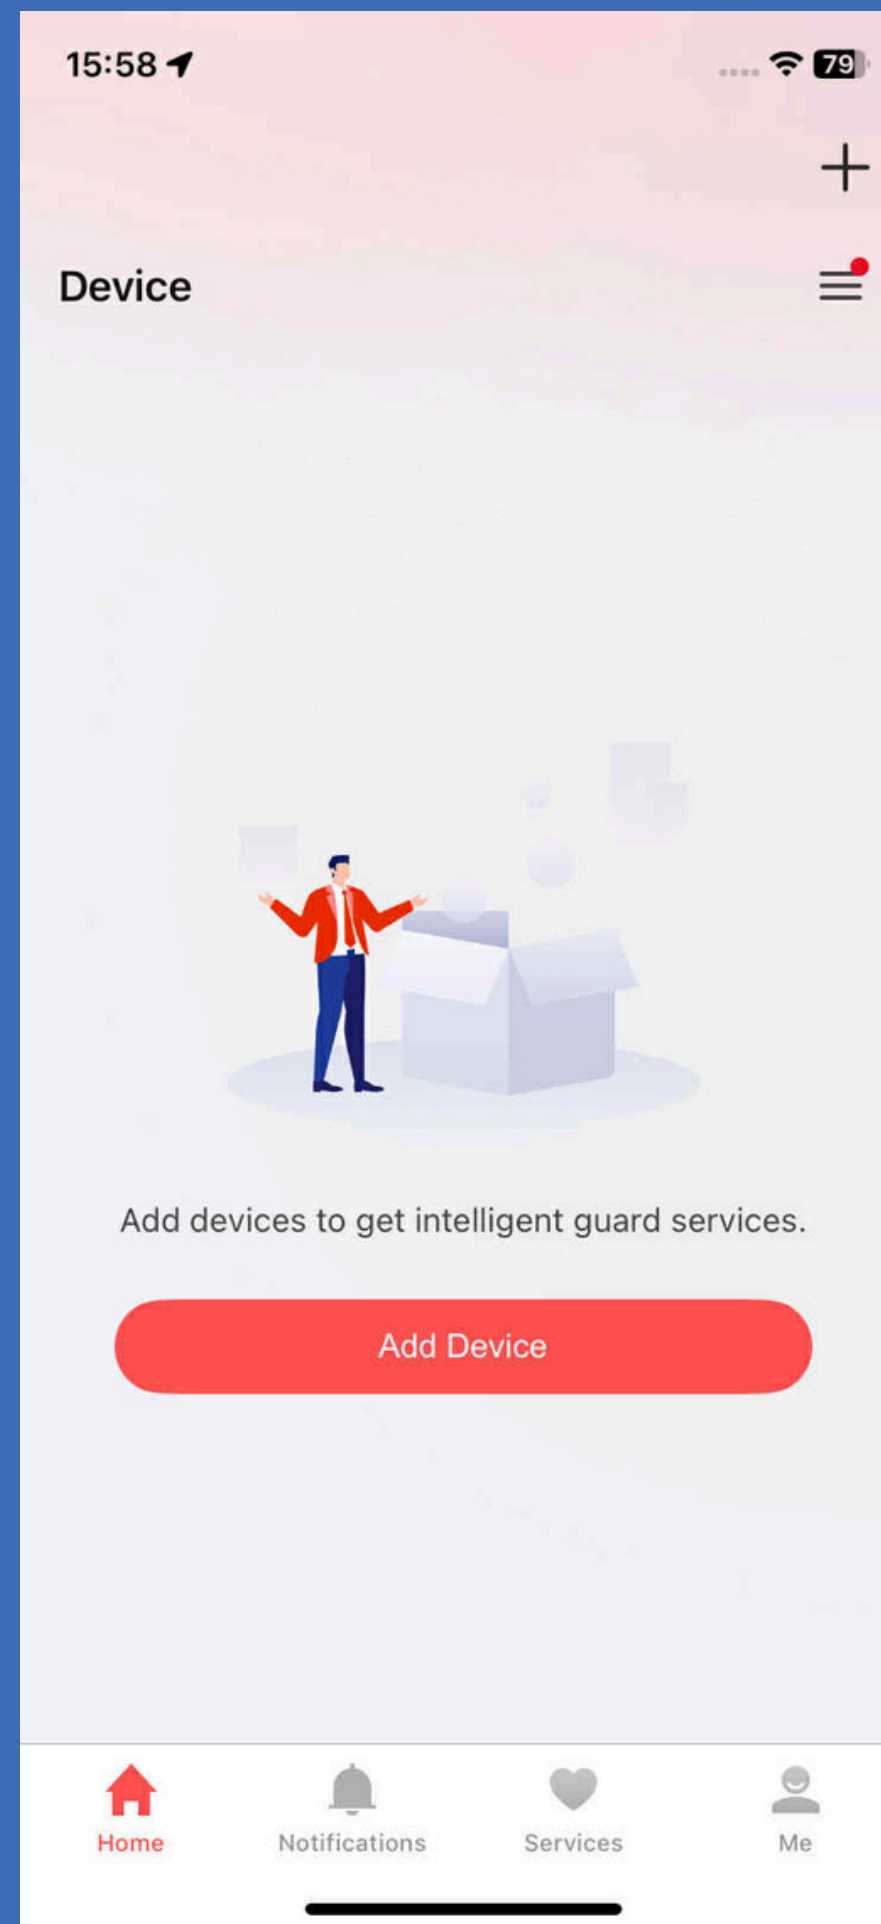

4. Add the NVR Device

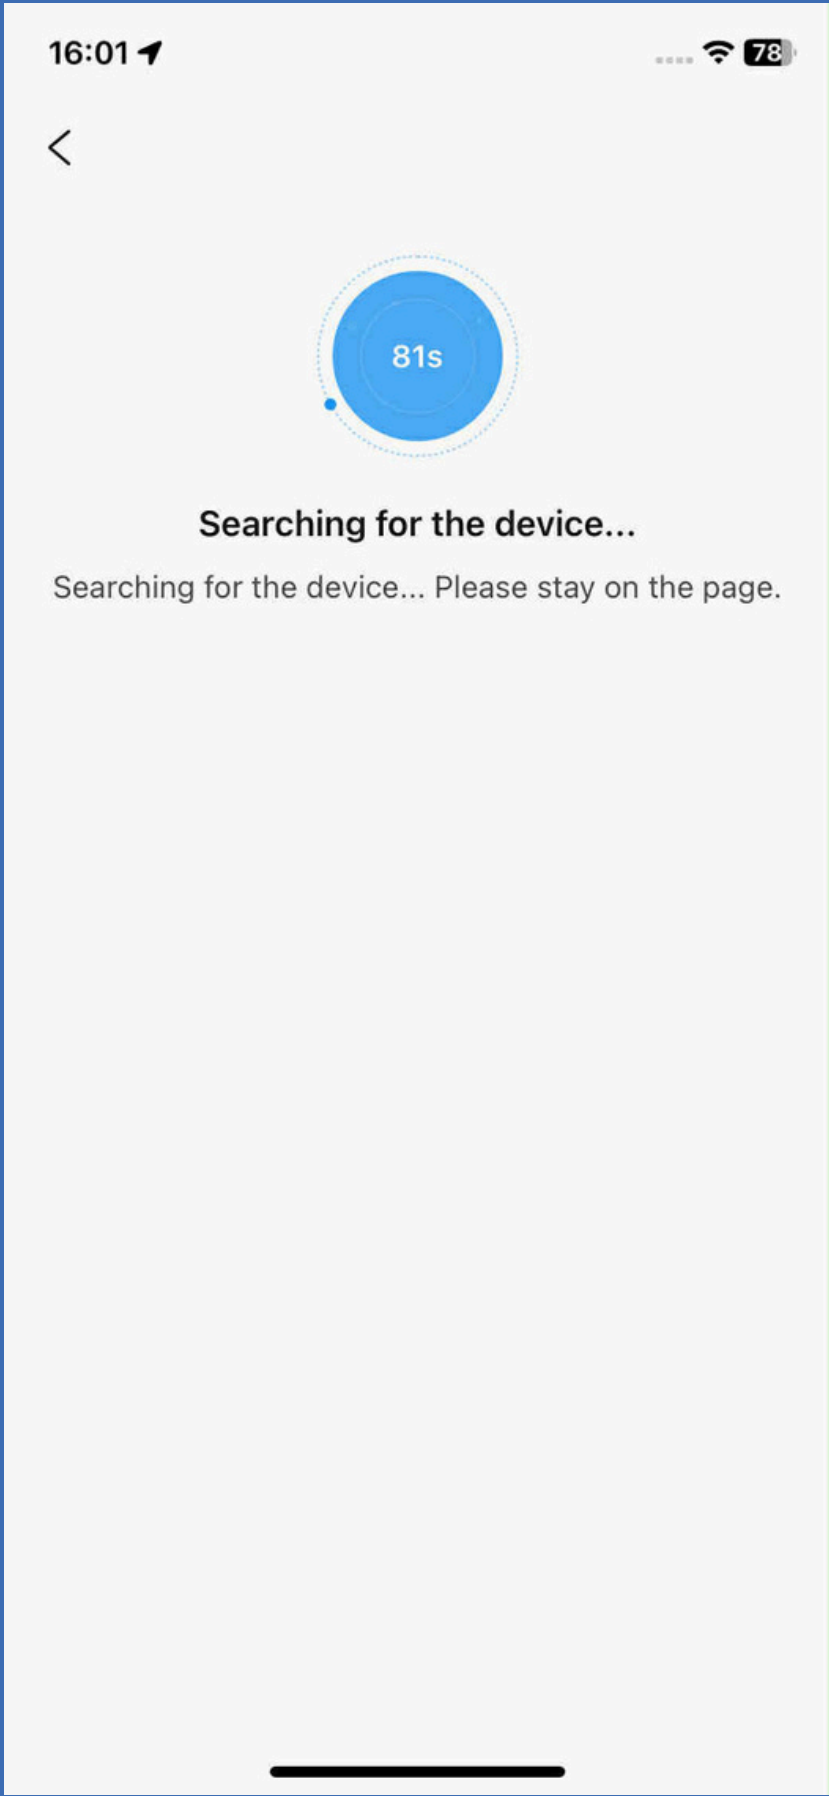

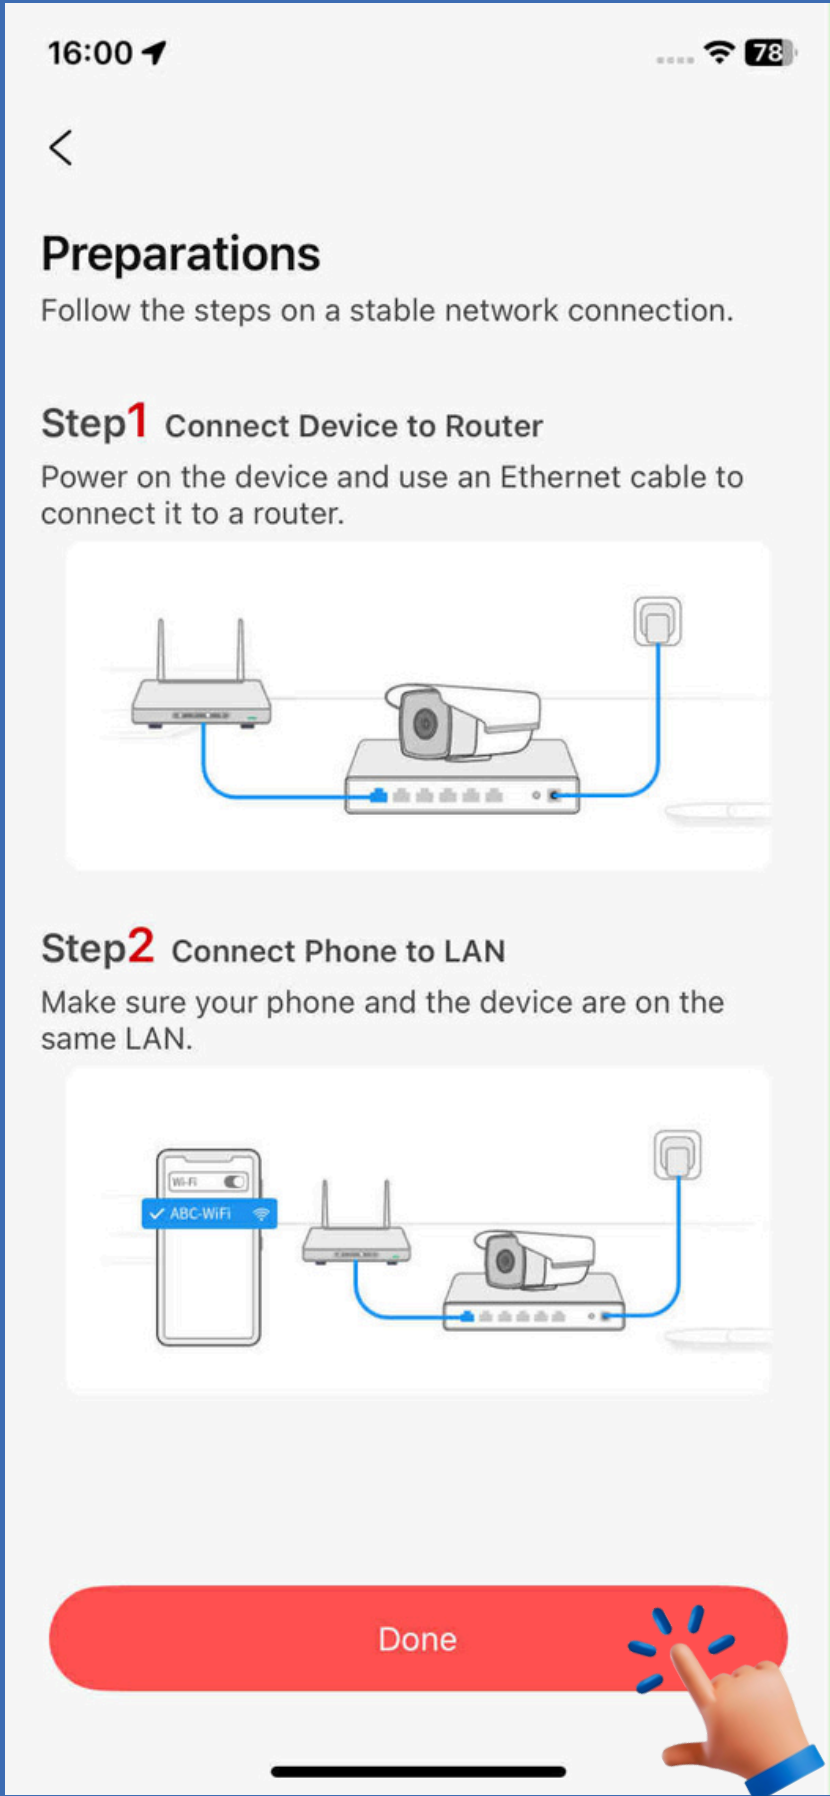

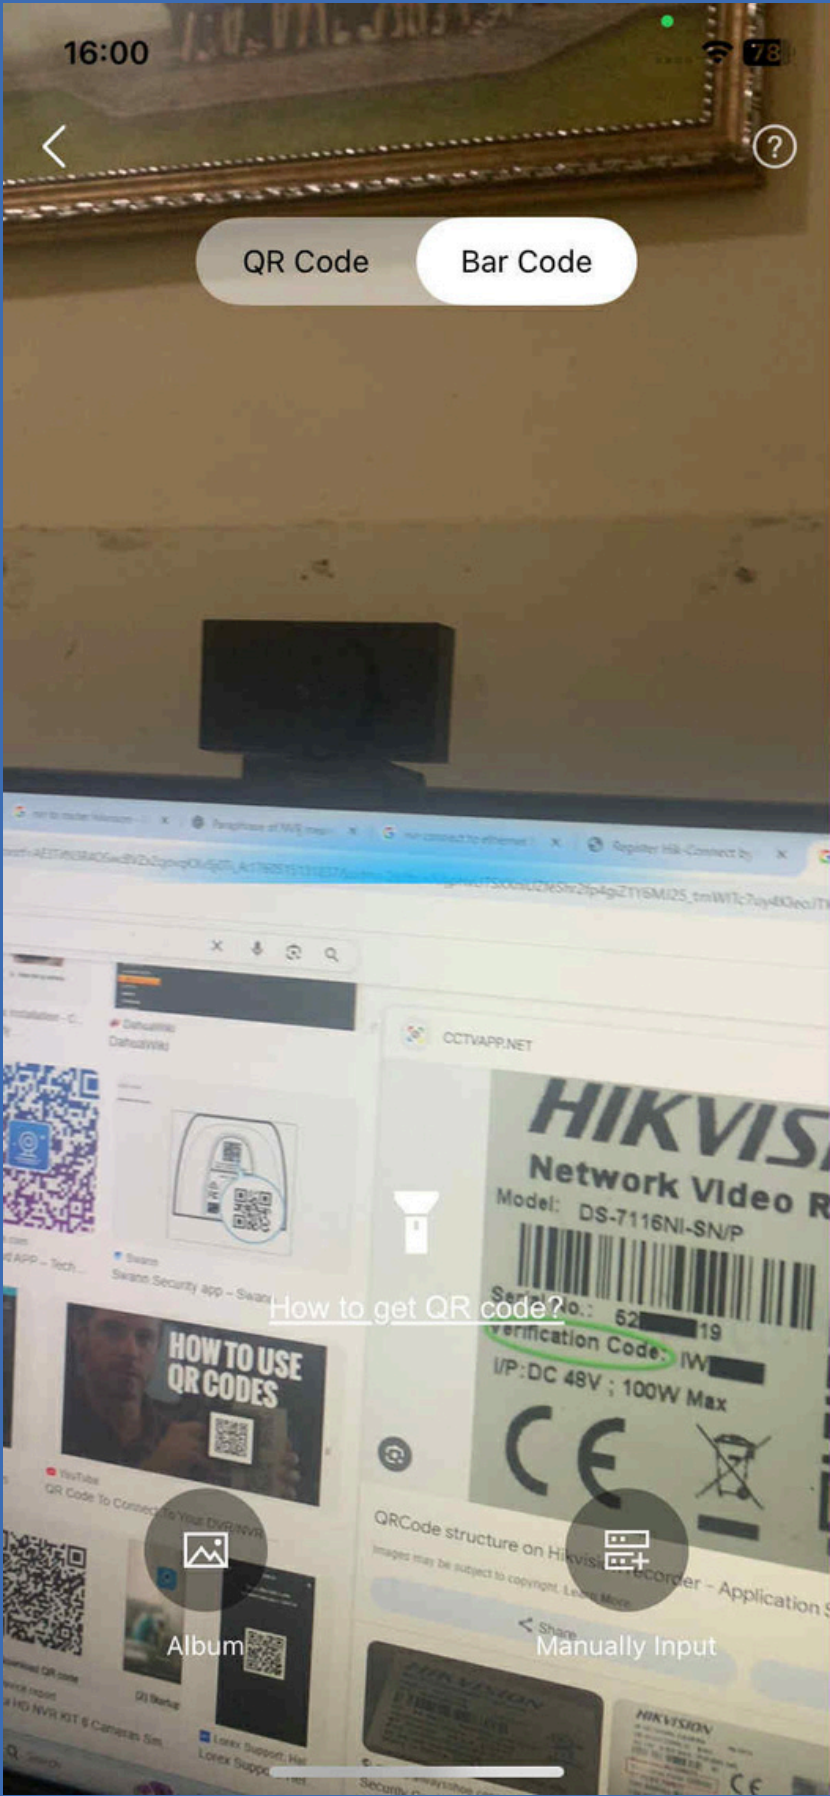

1. Use the app's "Add Device" or "Device Management" option.
2. Scan the QR code on the NVR (usually found on a sticker or the system UI).
3. Alternatively, enter the NVR's serial number or local IP address.

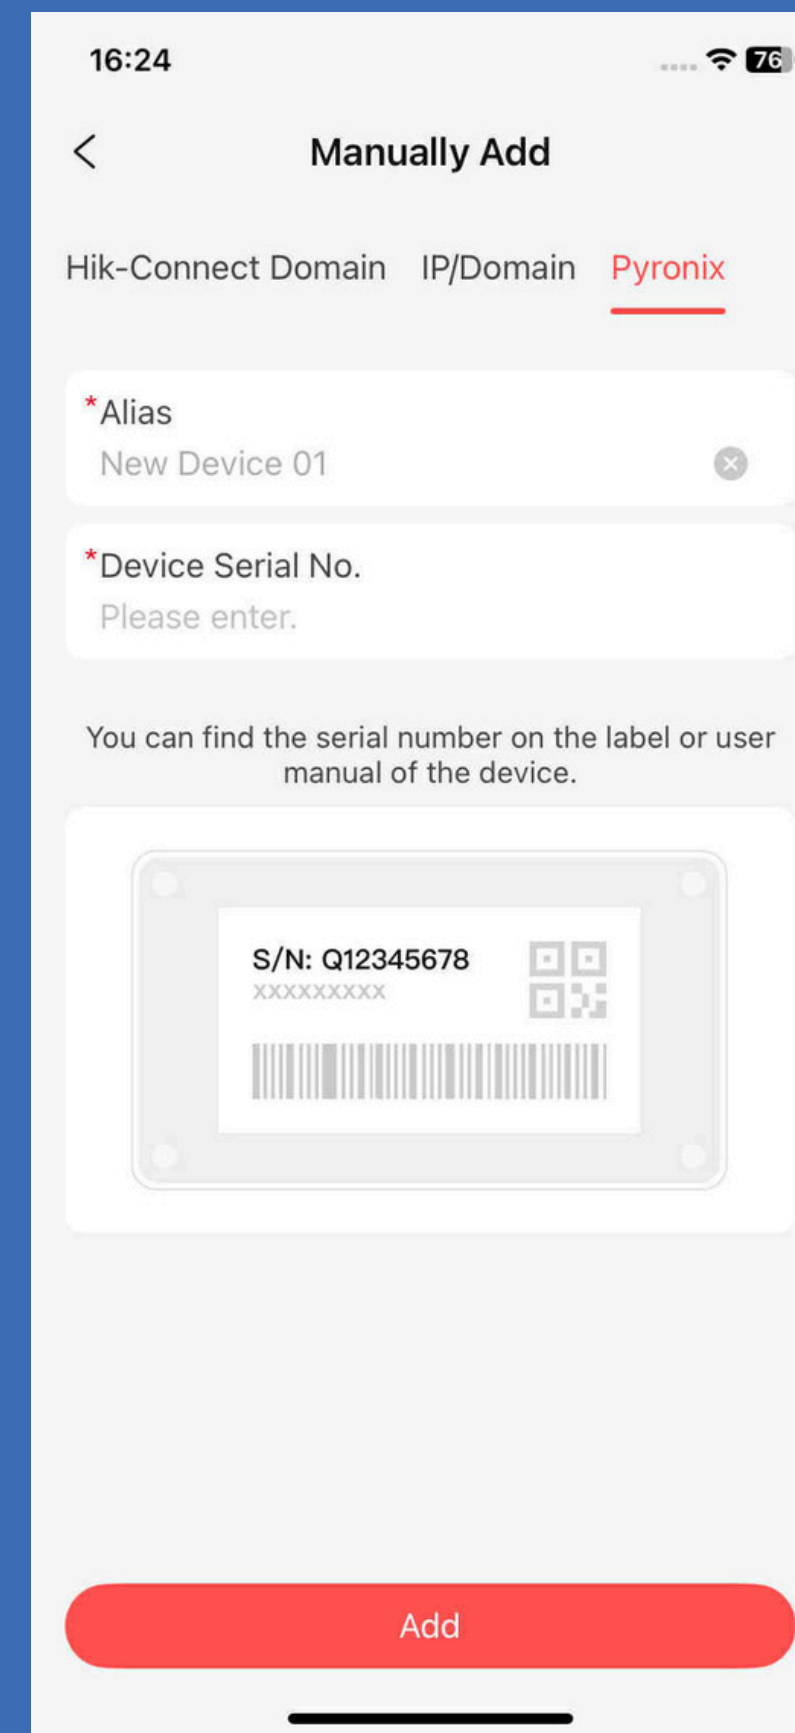

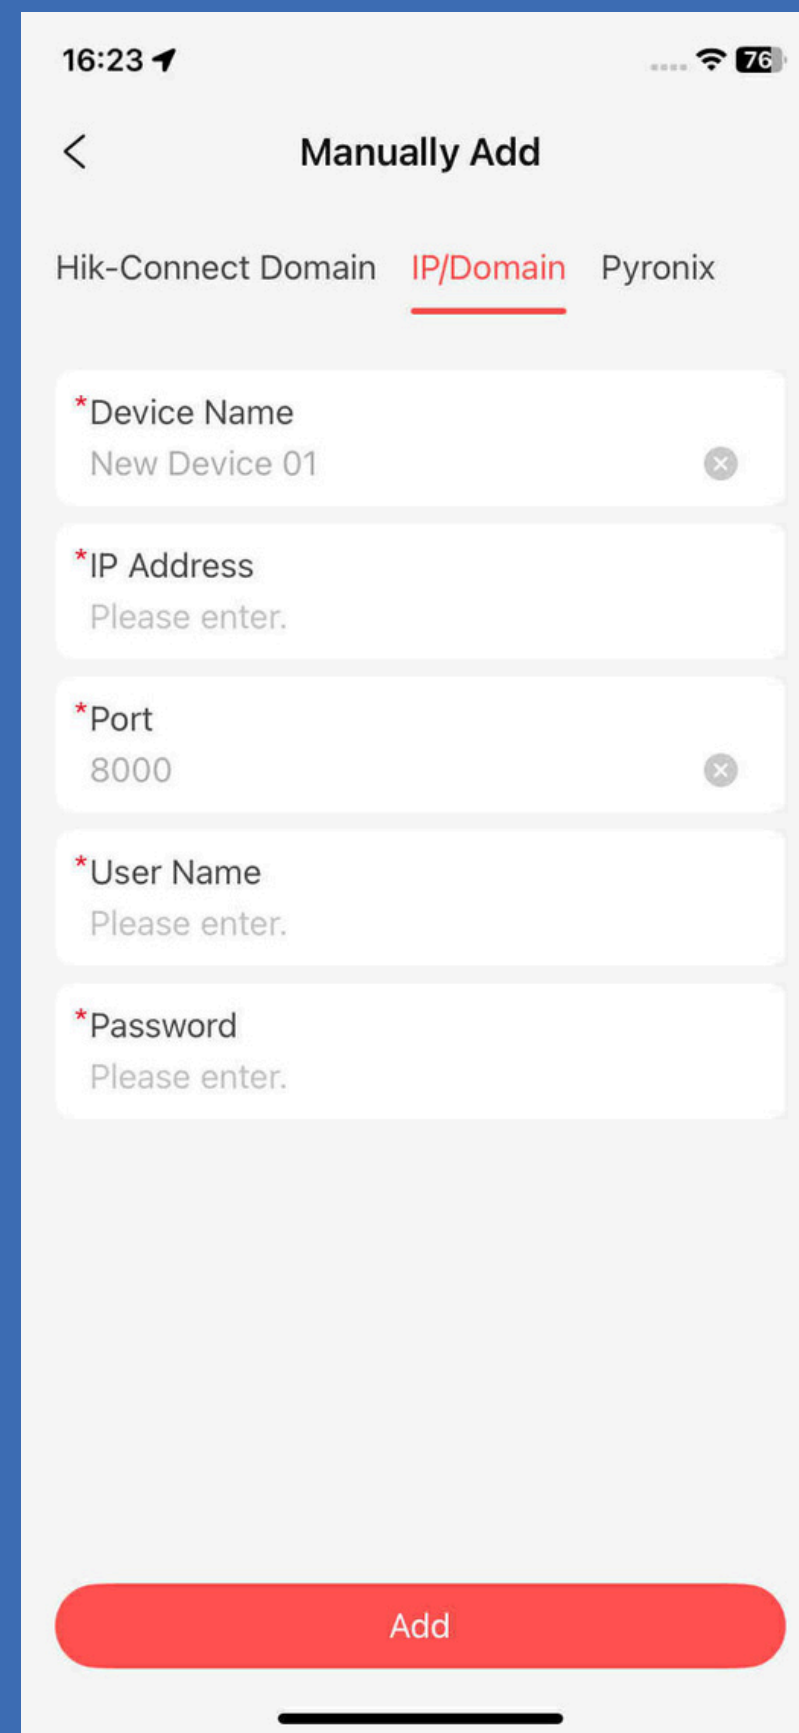

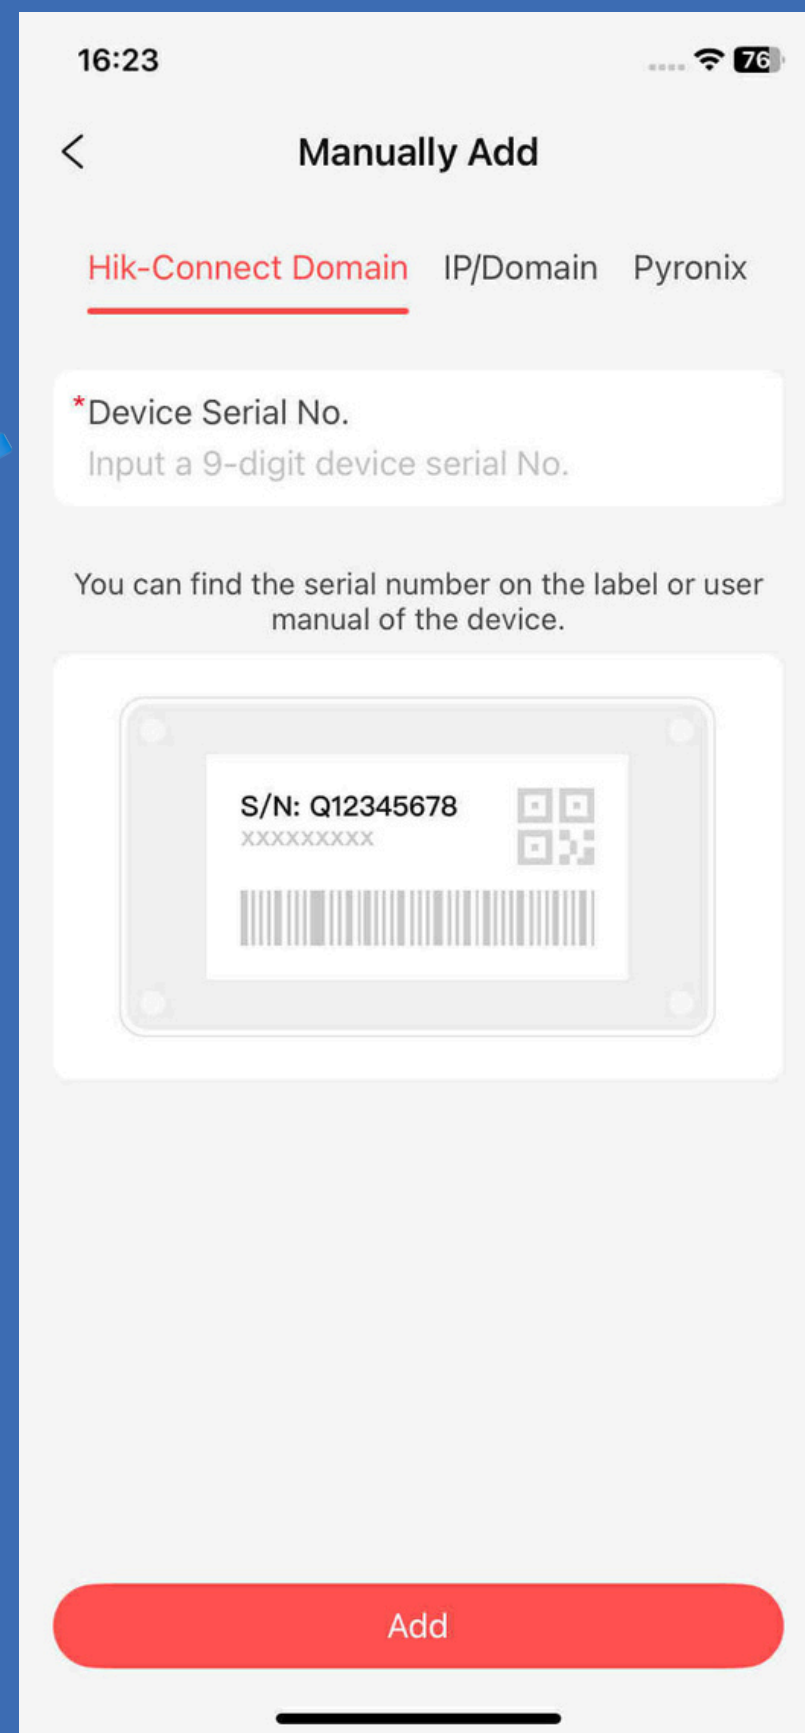

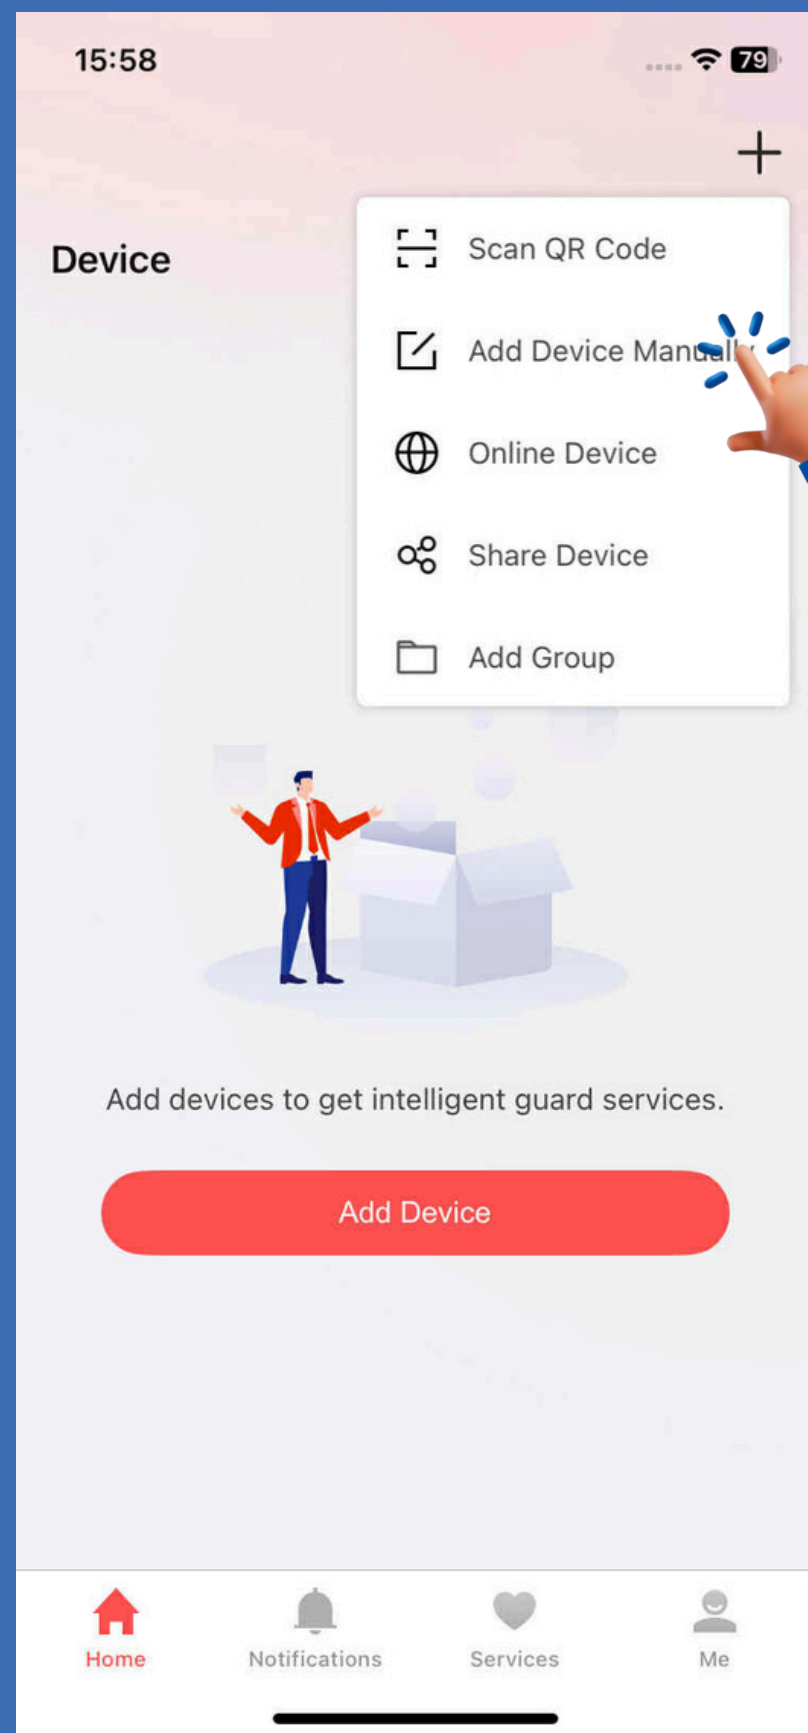

4. Add the NVR Device

4. Add the NVR Device (Scan QR Code / Bar Code)

4. Add the NVR Device (Add Device Manually)

5. Configure Device Settings

Once added, you can adjust:

- **Camera names**
- **Motion detection zones**
- **Recording schedules**
- **Push notifications**
- **Live view settings (HD/SD)**

6. Test Live View and Playback

- Use the app to view live footage and playback recordings.
- Enable remote access (P2P or port forwarding if needed).

Benefits of Mobile Setup

Benefits of Mobile Setup

- PC-free setup
- On-the-go configuration
- Remote monitoring
- Instant motion alerts

DVR vs. NVR – What's the Difference?

DVR vs NVR

- DVR converts analog footage to digital format.
- NVR works only with digital footage.
- DVR processes data at the recorder.
- NVR processes and encodes data at the camera.
- DVR connects via coaxial cable (analog CCTV).
- NVR connects via Ethernet or WiFi (IP camera system).

DVR vs NVR

Categories	NVR (Network Video Recorder)	DVR (Digital Video Recorder)
 Cameras	Works with IP cameras	Works with analog cameras
 Resolution	Offers higher resolution and better image quality	Offers lower resolution compared to NVR
 Scalability	Easily scalable, accommodates a larger number of cameras	Less flexible scalability due to analog camera limitations
 Features	Advanced features like motion detection, remote access	Limited features compared to NVR systems
 Low Light/ Night Vision	Well-suited for low light conditions and night vision	Not ideal for low light conditions or night vision scenarios

Conclusion

Thank you !
